

Technical Consultant - BIM

Profile & Responsibilities:

Autodesk Consulting EMEA (Europe, Middle East & Africa) implements Autodesk BIM (Building Information Modelling) solutions for our customers across the region. We are looking for a multi-disciplinary BIM Technical Consultant able to work in various contexts, such as the Plant, Oil & Gas, and Infrastructure sectors, to form a key part of this strategic team.

As a Technical Consultant you will be essential for working directly with our customers and developing/contributing to their BIM implementation strategy (in collaboration with our sales, consulting delivery and business development teams) for our major account customers.

The position combines your pre-sales and post-sales consultancy skills, your industry experience, your technical and professional know-how, and your passion for educating customers on Autodesk's BIM solutions.

- Carry out the implementation of Autodesk's BIM solution on projects, collaborating with Autodesk sales and consulting delivery and business development teams
- Analyse customer business workflows and document findings
- Create, Validate and Execute BIM implementation plans, leveraging your industry experience and best practices
- Manage customer relationships on implementation projects
- Document, share and promote BIM team best practices for redistribution and consistent implementation at a corporate level
- Own a part of the BIM Solution Portfolio corresponding to your area of expertise
- Identify opportunities for new projects to enhance customer effectiveness in their own business

Required skills, experience and personal qualities :

- Degree in Engineering and/or recognized industry experience
- Minimum 8 years working experience in a built environment industry
- Broad understanding, garnered through work in practice, of industry throughout the asset lifecycle
- Broad understanding and a user of our Autodesk technology, such as the Building, Infrastructure or Plant Design Suites
- Experience in applying BIM principles on real projects
- Experience in software product adoption
- Experience in business process improvement principles, and implementing change in complex organisations
- Fluency oral and written in English & Russian, additional language skills would be an advantage.
- Excellent verbal and written communication skills; ability to communicate complex technical details coherently

- Able to travel up to 75% of the time and enjoy working with diverse groups of people with widely variable technical skills

Furthermore, you are goal-oriented, and you like to take on initiative and responsibility. You do not mind working on multiple projects at a time. You are able to act independently while working on a multi-disciplinary and geographically diverse team. You can effectively communicate with this team, even with remote and international team members.
